What are the products of glycolysis answers

Complete the aldolase reaction of glycolysis by drawing the product or products.

Modify the molecule, shown in linear form for simplicity, to show the product or products of the reaction.

Select Draw Rings More Erase

C H O P

CELLULAR RESPIRATION

Before cellular respiration (the definition from 3.7.2)

What is the first step in cellular respiration that begins releasing energy stored in glucose?

A. Glycolysis
B. Lactic acid fermentation
C. Citric acid cycle
D. Electron transport chain

The energy for transport into mitochondria during aerobic respiration is provided by _____.

A. NADH
B. FADH₂
C. Pyruvate
D. Glucose

If oxygen is not present, glycolysis is followed by _____.

A. Fermentation
B. Citric acid cycle
C. Electron transport chain
D. Lactic acid fermentation

Where do the electron carriers produced during glycolysis transfer their electrons during the electron transport chain?

A. Matrix
B. Inner mitochondrial membrane
C. Outer mitochondrial membrane
D. Cytoplasm

Which of the following does not happen during cellular respiration?

A. Glycolysis
B. Lactic acid fermentation
C. Citric acid cycle
D. Electron transport chain

How many ATP molecules are added to get pyruvate from glucose?

A. 4
B. 8
C. 12
D. 16

How many protons are pumped across the membrane during the electron transport chain?

A. 4
B. 8
C. 10
D. 12

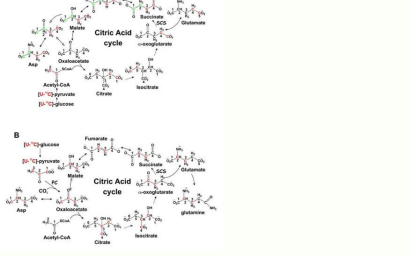

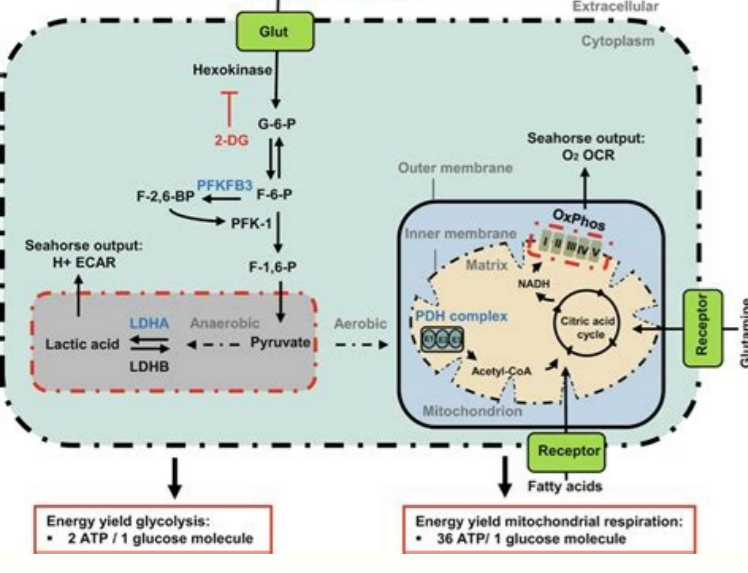

Match the letters in the diagram with the labels. (You can use more than one letter.)

A. Matrix
B. Intermembrane space
C. Outer membrane
D. Outer membrane (crease)
E. Inner mitochondrial membrane
F. Inner mitochondrial membrane (crease)

How many protons are pumped across the membrane during the electron transport chain?
How many protons are pumped across the membrane during the electron transport chain?
How many protons are pumped across the membrane during the electron transport chain?

Match the words to the correct label. (You can use more than one word.)

A. Glycolysis
B. Citric acid cycle
C. Electron transport chain
D. Fermentation
E. Lactic acid fermentation

What are the products and reactants of glycolysis. What are the products of glycolysis. What are the products of glycolysis 9.2. What are the products of glycolysis quizlet.

Glucose is broken down into pyruvate through glycolysis. Glycolysis is the first step in cellular respiration. It occurs in the cytoplasm and does not require oxygen. The products of glycolysis are pyruvate, ATP, and NADH. Pyruvate is then transported into the mitochondria for the citric acid cycle. The citric acid cycle produces CO2 and NADH. The electron transport chain uses NADH and FADH2 to produce ATP and H2O. The overall equation for cellular respiration is: C6H12O6 + 6 O2 → 6 CO2 + 6 H2O + 36 ATP.

Glucose is broken down into pyruvate through glycolysis. Glycolysis is the first step in cellular respiration. It occurs in the cytoplasm and does not require oxygen. The products of glycolysis are pyruvate, ATP, and NADH. Pyruvate is then transported into the mitochondria for the citric acid cycle. The citric acid cycle produces CO2 and NADH. The electron transport chain uses NADH and FADH2 to produce ATP and H2O. The overall equation for cellular respiration is: C6H12O6 + 6 O2 → 6 CO2 + 6 H2O + 36 ATP.
